

Decision Analysis and Game Theory (61217)

Instructors: E.KYRIAKIDIS – M.ZAZANIS

Elective Course, 4th semester, 5 ECTS units

Course level: Graduate (MSc)

Language: Greek

Course Description

Decision processes, decision criteria, a priori criterion, a posteriori criterion, decision trees, utility, Von Neumann utilities, games, strategies, stable games, unstable games solution by linear programming, dominance.

Prerequisites

Probabilities, Linear Algebra.

Target Learning Outcomes

The students will be taught decision processes, decision criteria, a priori criterion, a posteriori criterion, utility. They will be able to construct decision trees. They will also be able to solve find the optimal solution of a game using linear programming.

Teaching and Learning Activities

Lectures in classroom. Theory and Exercises.

Assessment and Grading Methods

Written Exams.
